

유다현 과제

2022-05-19

regexHelper , Spinner 이하 파일 동일하기 때문에 참고 하지
않았습니다.

App.js

```
import React from "react";
import "./assets/css/style.css";
import useAxios from "axios-hooks";
import regexHelper from "../libs/RegexHelper";

import Spinner from "../component/Spinner";

const App=()=> {

/*데이터 저장을 위한 Ajax 요청 객체 생성 - 메뉴얼 전송 모드*/
  const [{loading},refetch] = useAxios({
    url:"http://localhost:3001/member",
    method:"POST"
  },{manual:true});

  const onSubmit = (e)=>{
    e.preventDefault();

    const current = e.target;
    try{
      regexHelper.value(current.userid,"아이디를 입력하세요");
      regexHelper.minLength(current.userid,2,"아이디는 두글자 이상 입력하세
요");
      regexHelper.maxLength(current.userid,20,"아이디는 20글자 이하 입력하
세요");

      regexHelper.value(current.userpsw,"비밀번호를 입력하세요");
      regexHelper.minLength(current.userpsw,2,"비밀번호는 두글자 이상 입력하
세요");
      regexHelper.maxLength(current.userpsw,20,"비밀번호는 20글자 이하 입력
하세요");

      regexHelper.value(current.userpswre,"비밀번호확인 칸을 입력하세요");
      regexHelper.compareTo(current.userpsw,current.userpswre,"비밀번호
재확인 칸을 확인하세요");

      regexHelper.value(current.username,"이름을 입력하세요");
      regexHelper.minLength(current.username,2,"이름은 두글자 이상 입력하세
```

```

요");
    regexHelper.maxLength(current.username, 40, "이름은 40글자 이하 입력하
세요");

    regexHelper.value(current.useryear, "생년을 입력하세요");
    regexHelper.num(current.useryear, "생년은 숫자로 입력하세요");
    regexHelper.maxLength(current.useryear, 4, "생년은 4글자 이하 입력하세
요");

    regexHelper.value(current.usermonth, "생월을 선택하세요.");

    regexHelper.value(current.userday, "생일을 입력하세요");
    regexHelper.num(current.userday, "생일은 숫자로 입력하세요");
    regexHelper.maxLength(current.userday, 2, "생일은 2글자 이하 입력하세
요");

    regexHelper.email(current.useremail, "이메일 형식을 확인하세요");

    regexHelper.phoneNum(current.usernum, "핸드폰 번호를 확인하세요");

    regexHelper.value(current.usercountry, "지역을 선택하세요");

    regexHelper.num(current.autonum, "인증번호는 숫자로 입력하세요.");

} catch (e) {
    console.error(e);
    window.alert(e.message);
    e.field.focus();
    return;
}
let json = null;
//입력, 수정, 삭제 처리는 async ~await 문법을 사용한다.
(async () => {
