App.js

```jsx
import React  from "react";
import {useState} from "react";

function App() {
  const [숫자, 숫자바꿈] = useState("");
  const myResult = React.useRef();

  const 별찍기 =(e)=>{
    const max = e.target.value;
    let star ="";

    for (let i = 0; i < max; i++) {
      for (let j = 0; j <= i; j++) {
        star +="*";
      }
      star += "</br>";
      myResult.current.innerHTML = star;

    }

      숫자바꿈(
        ()=>{
          console.log(myResult);
        }

      );

  };

  return (
    <div>
      <h2>Exam07</h2>
      <p>useState,useEffect,useRef를 사용한 별찍기</p>
    <hr/>
    rowNum:
    <input onChange={별찍기} type="number" value={숫자} />

    <hr/>
    <div ref={myResult}></div>
    </div>
  );
}
```

```
export default App;
```

Exam07

useState,useEffect,useRef를 사용한 별찍기

rowNum: 3
